**TABLE 3. Deaths Involving Pneumonia and/or Influenza (P&I)  
Reported During the Week Ending October 30, 2004 (Week 43)<sup>\*</sup>**

Week 43	Season-to-Date	Week 43 Last Season	5 Year Weekly Median
73	256	79	105

\* Beginning in week 35 of 2003, the number of P & I deaths includes both contributing and underlying cause of death. Prior to that time only deaths for which pneumonia and/or influenza was listed on the death certificate as the underlying cause were counted as P & I deaths. The five-year median has been recomputed using the new method for reporting P & I deaths.

### **Antigenic Characterization of Missouri Influenza Isolates submitted to CDC by the State Public Health Laboratory**

CDC antigenically characterizes a sample of positive Missouri influenza isolates, submitted through the Missouri Department of Health and Senior Services (DHSS), State Public Health Laboratory (SPHL). DHSS has submitted no influenza isolates this season to CDC for antigenic characterization.

#### **Results Received from CDC:**

No isolates submitted for the 2004-2005 season.

**Data Sources:** Laboratory-confirmed cases are reported to DHSS through the passive communicable disease surveillance system. Suspected influenza clusters and outbreaks are reported through the active surveillance system. Pneumonia and influenza deaths are reported through the DHSS Bureau of Vital Records. Influenza-like illness data by age category and total number of patient visits by week are reported voluntarily by participants in the U.S. Influenza Sentinel Physicians Surveillance Network.
